

Easy Operation Low Maintenance Induction Furnace Open Cooling Tower

Our Product Introduction

for more products please visit us on melt-furnaces.com

Basic Information

- Place of Origin: China
- Brand Name: Huarui
- Certification: patent; national testing report; quality management system
- Model Number: to be customized
- Minimum Order Quantity: 1 set
- Price: to be negotiated
- Packaging Details: waterproof
- Delivery Time: 30~45 days
- Payment Terms: T/T; L/C
- Supply Ability: 1000000 sets/year

Product Specification

- Cooling Method: Evaporation
- Installation: Easy
- Structure: Simple
- Operation: Easy
- Maintenance: Low
- Cost: Low

Product Description

Product Description:

Open type cooling towers are a popular choice of system for induction melting furnaces to carry away waste heat. The principle behind the cooling tower lies in the evaporation of water – when water droplets make contact with air, direct heat transfer between air and water results in its evaporation. At the same time, the pressure difference between the air and the surface of water vapor causes water to evaporate too, aiding in the cooling process. Heat and moisture from the water are both absorbed by dry and unsaturated air, with a part of the water evaporating in order to carry away all the heat that is present. This is how open type cooling towers create a cooling effect.

Features:

Starting a business often requires a significant amount of investment, but with a simple and well-structured facility, maintenance costs can be reduced to a minimum.

Investing in a facility with a straightforward structure holds numerous benefits. Such a layout helps reduce initial investment costs, as the facility won't require as many components or resources as a more complex one. In addition, maintenance is also much easier, saving further costs on services and maintenance.

Choosing a simple and straightforward structure not only helps lower initial investment, but also contributes to a more efficient and cost-effective operational experience over time.

Technical Parameters:

Property	Value
Installation	Easy
Cost	Low
Cooling Method	Evaporation
Maintenance	Low
Operation	Easy
Structure	Simple
Type	Open Type Cooling Tower for Melting Process/Open Type Cooling Tower for Induction Furnace

Applications:

Open Type Cooling Towers - Huarui with Customizable Model Number

Huarui Open Type Cooling Towers are ideal for industrial cooling needs. Equipped with patent, national testing report, and quality management system certification, these towers are built to last. With a minimum order quantity of 1 set, a competitive price and cost, as well as waterproof packaging, these towers can be delivered within 30-45 days with payment options of T/T and L/C. With an impressive supply ability of 1000000 sets/year, these cooling towers can easily meet your cooling needs. The simple structure and easy installation make these cooling towers a breeze to install and maintain, while the cooling method of evaporation ensures efficient and reliable performance.

Support and Services:

Open Type Cooling Tower technical support and services include:

Providing product design solutions and installation instructions

Providing technical consultation on product selection and installation

Providing technical support on product maintenance and repair

Providing training on product use and operation

Providing spare parts and related accessories

Packing and Shipping:

Packaging and Shipping for Open Type Cooling Tower:
The product will be securely packaged in a corrugated box with appropriate cushioning material
The box will be labeled with product name, handling and storage instructions, shipping address, and delivery information
The box will be sealed and shipped by a reliable shipping service
The customer will be notified of the shipping date and tracking information
